

Dawg Tag Battery Information

Dawg Tag Batteries.

Dawg Tags are powered by long life CR2450 Lithium disk battery that provides a typical life of 1 year+. Battery replacement is simple and replacement batteries are available at most drug stores. To keep you informed as to battery status, Dawg Tags have a two stage low battery warning system that works as follows: When battery reserve drops below 30% life the Dawg Tag LED will rapidly flash when the tag is picked up. (*This is a good time to replace your battery*) If ignored, at 10% remaining life the unit automatically changes to Manual mode, requiring you to push the Dawg Tag button to start the vehicle.
